

Relay Pricing and Plan Limits

Document owner: Sales • Last updated: 2026-01-05 • Internal reference; published pricing may lag by up to one week

Relay is sold on four plans. Three are self-serve and published; the fourth is negotiated. Plans are deliberately few, and the pricing page has been simplified twice, on both occasions by removing a plan rather than by adding one. The most common request from prospects is for a tier between Growth and Scale, and the most common reason a prospect on Growth exceeds their plan is endpoint count rather than event volume.

Plans

	Starter	Growth	Scale	Enterprise
Monthly price	49 EUR	249 EUR	1,200 EUR	Negotiated
Included events	100,000	2,000,000	20,000,000	From 40M per year
Overage per 10,000 events	0.40 EUR	0.40 EUR	0.25 EUR	Per agreement
Endpoints	5	50	Unlimited	Unlimited
Event history retention	7 days	30 days	90 days	Per agreement
Publish rate limit	500 req/s	500 req/s	5,000 req/s	Per agreement
Cross-region failover	No	No	Yes	Yes
Signal add-on	Not available	99 EUR per month	Included	Included
Support	Community forum	8 business hours	2 business hours	Per agreement
Contractual service credits	No	No	No	Per agreement

Table 1. Plan comparison. Dead letter queue retention is 14 days on every plan and is not a plan differentiator.

How events are counted

A delivered event is counted once regardless of how many retry attempts it required. This is a deliberate difference from several competitors, who count attempts, and it is worth raising explicitly in competitive conversations because it materially changes the cost of an unreliable receiving endpoint. An event that exhausts its retries and lands in the dead letter queue is counted once. An event replayed from the dead letter queue is counted again, on the reasoning that a replay is a new delivery initiated by the customer.

Overage is billed monthly in arrears and appears as a separate line on the invoice. There is no soft cap, no hard cap, and no throttling on exceeding the included volume, because the failure mode of throttling a customer's event delivery in order to enforce a billing threshold is worse for both parties than an unexpected invoice. Customers exceeding their included volume by more than 50 percent for two consecutive months are contacted by their account owner with a plan upgrade, which is almost always cheaper for them than sustained overage.

Billing

Billing is annual or monthly. Annual billing carries a 15 percent discount and is invoiced in advance. Monthly billing is charged to card on the first of the month. Plan downgrades take effect at the end of the current billing period; upgrades take effect immediately and are prorated to the day. Annual customers who upgrade mid-term are invoiced for the difference on the remaining term rather than restarting the term, an arrangement finance permits but does not advertise.

Enterprise agreements

Enterprise terms are individually negotiated and vary more than is generally appreciated internally. Seven Enterprise agreements currently include a service credit clause and the terms differ in every one. Kirren Retail's agreement, signed in 2022 and renewed in 2025, is the largest and specifies a credit of 10 percent of monthly fees for each full hour of S1 delivery interruption, capped at 50 percent of the monthly fee. It also specifies a 15 minute first response target for S1 at any hour including weekends, which is a support commitment rather than a pricing term but which is negotiated at the same time and by the same people.

Standard plans carry no contractual credit of any kind. Where a customer on a standard plan is materially affected by an incident, credits may be granted at the discretion of the account owner in sales, and three such discretionary credits were granted following the February 2026 backlog incident. Support may never promise a credit, may never estimate one, and may confirm only that an incident occurred and state its duration; the full escalation path for credit conversations is set out in the support escalation policy.

Vault

Vault is no longer sold and new signups were disabled in October 2025. Existing Vault customers were moved to a flat zero euro rate at the same time and retain full access until end of life on 30 June 2026. Vault does not appear on any invoice issued after October 2025. Renewal conversations with customers holding both Relay and Vault should not treat the Vault sunset as a discount lever, since the product is already free to them; where a customer raises it, the account owner should point them at the migration guide and offer a call with support.
