

# Nordvane OU — Company Overview

Document owner: People Operations • Last updated: 2026-01-12 • Review cycle: annual

Nordvane OU is an event infrastructure company registered in Tallinn, Estonia. It was founded in March 2019 by Anneli Sarapuu, who serves as chief executive, and Tomas Brenner, who serves as chief technology officer. Both had spent the previous four years at a payments company where, between them, they rebuilt the same webhook delivery system three separate times: once to add retries, once to add ordering guarantees, and once because the second attempt made the first one unmaintainable. The observation that led to Nordvane was not that webhook delivery is difficult, but that it is difficult in exactly the same way at every company that attempts it, and that almost none of them want to be in the business of solving it.

The company has been profitable since the third quarter of 2023 and has taken no external investment beyond a seed round of 1.2 million euros raised in 2020. That round was used almost entirely to fund the eighteen months between the first paying customer and sustainable revenue. There has been no subsequent round and there is no current intention to raise one. This is stated plainly here because new employees ask, and because the answer materially affects how the company makes decisions: growth targets are set against what revenue supports rather than against what a board expects.

## People and locations

As of January 2026 Nordvane employs 82 people across 14 countries. There is no headquarters building. The registered address in Tallinn is a shared office used for legal correspondence and for the two annual company offsites, and on an ordinary working day nobody is in it. Roughly 60 percent of staff work in engineering, 15 percent in support, and the remainder are split between sales, people operations, and finance. The support function is deliberately staffed by people with production engineering experience rather than by career support agents, which is expensive and is the single most common thing customers comment on in renewal conversations.

Standard employment terms for full-time staff include 25 days of paid annual leave in addition to public holidays, a monthly coworking stipend, a hardware allowance administered by the operations team, and participation in the on-call rotation for engineering roles. Contractors are engaged under a separate agreement and are not covered by the internal policies described in this handbook; where a contractor arrangement appears to require something from this handbook, the agreement takes precedence and people operations should be asked to clarify.

## Products

Nordvane sells three products, two of which are actively developed. The table below is the canonical statement of what exists and what state it is in; marketing material occasionally lags behind it.

| Product | Description                                                                                                                           | Status | Generally available | End of life  |
|---------|---------------------------------------------------------------------------------------------------------------------------------------|--------|---------------------|--------------|
| Relay   | Core event delivery platform. Accepts events and delivers them to customer-owned HTTPS endpoints with retries, ordering, and signing. | Active | November 2020       | —            |
| Signal  | Delivery observability add-on. Per-endpoint latency, failure rate, and retry analytics.                                               | Active | June 2024           | —            |
| Vault   | Secrets storage. Sunset announced September 2025; new signups disabled October 2025.                                                  | Sunset | March 2022          | 30 June 2026 |

Table 1. Product status as of January 2026.

Vault was, in retrospect, a product built because it was adjacent rather than because it was asked for. It reached approximately 300 paying customers and never grew beyond that. The decision to sunset it was made in August 2025 and communicated the following month, with a nine month notice period that was chosen deliberately to be longer than any competitor in the category offers. Existing Vault customers were moved to a zero euro rate in October 2025 and retain full access until end of life. Individual migration support is handled by the account owner in sales rather than by support.

Regions

Nordvane operates four delivery regions. A customer selects a primary region at signup, and that choice determines where their events are stored and from where deliveries originate. Changing region after signup is possible but is a manual operation coordinated with support, because historical events do not migrate. Cross-region failover, in which deliveries automatically shift to a secondary region during an outage in the primary, is available on the Scale plan and above.

| Region code | Location               | Live since     | Cross-region failover partner |
|-------------|------------------------|----------------|-------------------------------|
| eu-tll      | Tallinn, Estonia       | November 2020  | eu-fra                        |
| eu-fra      | Frankfurt, Germany     | June 2021      | eu-tll                        |
| us-iad      | Northern Virginia, USA | March 2022     | —                             |
| ap-sin      | Singapore              | September 2024 | —                             |

Table 2. Delivery regions.

The largest single customer by event volume is Kirren Retail, which has been on a negotiated Enterprise agreement since 2022 and renewed it in 2025. No single customer accounts for more than 9 percent of revenue, a threshold the finance team reviews quarterly and which has been treated as a soft ceiling since the company became profitable. Customer concentration is the risk the founders discuss most often, ahead of competition and well ahead of technical risk.
